

Task t168 (GitLab): "repositories I contributed to with >100 stars" — reference answer: N/A

A · 2026-07-21 run — writer sees the reference answer

B · 2026-07-22 run — flukes dropped from the contrast, writer answer-blind

Same task, same site, same base model. What differed: whether the lucky rollouts' answer form ("N/A") could reach the lesson writer.
